Site Description

EZ Games is an online games store run by gamers, aimed at gamers. The store aims to allow gamers to purchase any game they want entirely online, having it shipped directly to them – this saves the hassle of having to travel to store locations, or phone various stores to check inventory/stock. If an item is a pre-order, or out of stock, the user can still order the game – the payment will only be processed when the game arrives at the EZ Games warehouse, ready to be shipped to the buyer.

Non-registered users can view the all pages, but will not be able to check out/make purchases. Users can register or log in. This will allow them to make any purchase(s) they wish. The site offers 4 different email contacts for various questions, as well as a phone number that can be reached during typical business hours.

Buying a game? We make it EZ!

Version History

Github: https://github.com/Dmasci99/Comp2007-Project2
Site history:

- August 5, 2016 – Version 1.0.0 : Initial site setup. Landing, About, and Contact pages (first drafts) up. Initial site security in place.

Typography & Color

The color and typography of this site is customized fully to best meet the site needs.

Typography: 'Lato' (not available in Word to preview) is the single font used across the site. It is one typeface of the “sans serif” font family. Only one font was used in order to keep the pages and content consistent, and ‘Lato’ was chosen for being easy-to-read, sleek, and neat.

Color: The site uses a blue-tones color scheme, along with white, black, and greys which are all easy on the eyes. This color scheme allows for a silver shade for the background, allow dark blue text to contrast. Other shades of blue are used for borders, backgrounds, buttons, and highlighting, drawing an eye-catching, non-abrasive contrast between different page content.
